

-1- PRESENTATION FORM

Name and surname / Name of the group

Maria Fiter Crea-Re Studio

City

Valencia

Country

Spain

Bio

I was studying Art History in Poland and in Italy but I always had a passion for design, which now I am dedicating my life into. I create eco-friendly lighting made mostly with paper-mache and wood; I also make furniture by recycling old furniture. To create paper pulp lamps I use only old newspapers – this way they are 100% recycled. In some of my lamps I use wood – the leftovers from the carpenters' workshop.

-2- PRODUCT INFORMATION

Product name 1

Pluto paper pulp pendant lamp

Dimensions

56 cm high x 50 cm wide

Approximate weight

2 kg

Technical description

Eco-friendly lamp made from paper pulp obtained using old newspapers.

The story behind the lamp: Belongs to the collection of two lamps which name refers to the name of the dwarf planet called Pluto. Its structure is changing while orbiting around the Sun and that fact become a source of inspiration for me to create two lamps. Pluto's internal structure consists of dense core of rocks surrounded by a mantle of ice. Its orbit is elongated and when Pluto is closer to the Sun - the temperature increase causing the ices to sublimate into gas. This version is delicate and the layer of paper is not so intense.
